

Flashcards for yes/no

It is preferable to use signs for "yes" and "no" that are intuitive and easily recognized which the person can signal using his/her head, eyes or hand. When a person is unable to produce these signs using his head, eyes or hand it is possible to use yes/no flashcards.

- ☑ Choose the set of flashcards which are appropriate for the patient (older adult/young person, a sign that is easily understood/not easily understood)
- ☑ Print and laminate the flashcards
- ☑ Place the flashcards in front of the patient so that "yes" is in front of his right eye and "no" is in front of his left eye
- ☑ The patient looks at the flashcards to indicate his preferences
